

Modern beverage runs on OHANAFY.

Mobile Launch Brief · iOS vs. Android deployment · Prepared Sep 8, 2026 · Target launch Mon Sep 28, 2026

Getting the Ohanafy companion app onto both stores

Executive summary, then workflow, bottlenecks, checkpoint timeline, fallback plan, checklist and sources · organization (company) accounts · free app, login required · target Sep 28, acceptable slip to ~Oct 12

Bottom line. Android by Sep 28 is realistic. iOS by Sep 28 is **possible but not assured**: Apple's organization-account verification is the single longest, least controllable step in the whole program (typically 1–3 weeks, occasionally 4+), and **every** iOS distribution path, TestFlight included, is locked until it clears. Enroll in both programs today, freeze a "review-ready" package by Sep 15, submit Android for review by Sep 17, and make the iOS go/no-go call on Sep 21.

What the two processes have in common

- Company account with your existing D-U-N-S number; the legal name and address you enter must **match the D&B record exactly**.
- A store listing (text, screenshots, privacy policy URL, support contact), a privacy disclosure form, and an age-rating questionnaire.
- Human/automated review of the first build. Because your app requires a login, **reviewer demo credentials** are mandatory on both stores; a missing or broken demo account is the #1 avoidable rejection.
- You control the release moment after approval (Apple "manual release"; Google "managed publishing").

Where they differ (the things that bite first-timers)

- **Account time.** Google: days. Apple: weeks, with a possible verification phone call to your Account Holder.
- **Beta distribution.** Apple TestFlight external builds need a one-time Beta App Review; Google's internal test track goes live in minutes with no review.
- **Review clock.** Apple: 90% of submissions in under 24 h. Google: "7 days or longer" for a new developer's first app.
- **Tooling.** iOS builds must be signed and uploaded from macOS/Xcode 26 (or a Mac CI service). Android builds can come from any OS.
- **Public disclosure.** A Google org account shows your legal address and phone on the listing; Apple shows company name only.

Key dates

Tue Sep 8

Enroll in both programs.
Confirm D&B record.

Fri Sep 11

Google account live;
internal test build to team.

Tue Sep 15

Review-ready package
frozen (demo login,
privacy, screenshots).

Thu Sep 17

Android submitted for
production review.

Mon Sep 21

iOS go/no-go: is the
Apple account open?

Tue Sep 22

iOS submitted for App
Review.

Mon Sep 28

Launch: manual release
on both stores.

Mon Oct 12

Outer limit of the slip
window.

01 Side-by-side at a glance

	Apple — App Store (iOS)	Google — Play Store (Android)
Program & fee	Apple Developer Program, organization: \$299/yr	Play Console, organization: \$25 one-time
Account prerequisites	Legal entity, D-U-N-S, an Account Holder with legal binding authority (officer/owner or documented delegate), work email on your domain, public website. Individuals: \$99, 1–2 days.	D-U-N-S, org name/address/phone/website, Google Payments profile whose name and address match D-U-N-S, OTP verification of every email and phone.
Time to a usable account	Org: ~1–3 weeks typical, up to 4+ (Apple states no SLA). US individuals: 24–48 h.	Identity review "a few days, up to ~5"; payment verification up to 5 days. Runs in parallel.
Pre-release / beta service	TestFlight. Internal: up to 100 App Store Connect users, no review. External: up to 10,000 testers by email or public link; first build per group gets Beta App Review (~12 h average). Builds expire after 90 days.	Testing tracks. Internal: up to 100 testers, live within minutes, no review. Closed: email lists/Google Groups, several hours, standard review. Open: public, unlimited (or ≥1,000 cap), standard review.
Store review — typical	Apple: 90% in <24 h. Observed Sep 2026: ~11 h waiting + ~2 h in review.	"Can take 7 days or longer." New accounts' first app is the slow case; 14+ days is reported.
Rejection cycle	Reply in Resolution Center, resubmit; each round ~1–2 days. Expedited review available for critical fixes/events.	Fix, resubmit; clock may restart. Support escalation only after 7–14 days.
Release control	"Manually release this version"; optional 7-day phased rollout.	Managed publishing; staged rollout by %.
Build requirements (2026)	Built with Xcode 26 / iOS 26 SDK (mandatory since Apr 28, 2026); privacy manifest with required-reason APIs; updated age-rating answers.	Target Android 16 (API 36) by Aug 31, 2026 (extension to Nov 1 available); 16 KB page-size support; Android App Bundle + Play App Signing.
Regional extras	EU: DSA trader status required to publish in the EU (since Feb 17, 2025).	Sep 30, 2026: Android developer verification begins in BR/ID/SG/TH (global 2027). Aimed at apps distributed outside Play; Play Console identity verification is your starting point.

Process deviations worth knowing

- **Android has a TestFlight equivalent** (internal / closed / open testing tracks). Practical differences: no review on internal; testers join via email lists or Google Groups rather than a TestFlight app; no 90-day build expiry.
- **Apple tester identity.** Internal TestFlight testers must be App Store Connect users on your team (fine for staff, awkward for customers). External testers only need an email or the public link.
- **Apple Account Holder role** is legally binding and hard to reassign; pick a durable officer, not a contractor.
- **Sign in with Apple** is required only if you offer a third-party social login; an Ohanafy username/password login does not trigger it.
- **Private distribution** is available if you ever want the app off the public store: Apple Unlisted App Distribution (link-only, by request) and Managed Google Play private apps. Not needed for launch.
- **EU distribution** on Apple requires declaring DSA trader status (contact details shown publicly). Limit initial availability to the countries you sell in if you'd rather defer.

02 The workflow, step by step

iOS — App Store

1. **Enroll** at developer.apple.com as an Organization. Account Holder = the person who enrolls; use their ohanafy.com email and your D-U-N-S. Expect email follow-ups and possibly a phone call. Pay \$299 when invited.
2. **Set up App Store Connect:** add team members, create the App ID / Bundle ID, signing certificates and provisioning profiles (Xcode "automatic signing" handles most of this).
3. **Upload a build** from Xcode 26 (or Xcode Cloud/CI). Processing ~30 min.
4. **TestFlight:** internal testers immediately; external group after Beta App Review (~12 h). Public link optional.
5. **Complete the listing:** name, subtitle, description, keywords, screenshots (6.9" and 6.5" iPhone; iPad if supported), privacy policy URL, support URL, App Privacy "nutrition label," age rating, export-compliance answer, **App Review Information with demo login and notes**.
6. **Submit for review.** Choose "Manually release." Respond to any Resolution Center message the same day.
7. **Release** on launch day; optionally phased.

Android — Google Play

1. **Register** at play.google.com/console as an Organization (\$25). Create/link a Google Payments profile with the exact legal name and address; enter D-U-N-S; OTP-verify emails and phones. Verification ~2–5 days.
2. **Create the app**, accept the Developer Distribution Agreement, enable Play App Signing.
3. **Upload an .aab** to the **internal testing** track — live in minutes for up to 100 testers. (Org accounts are **not** subject to the 12-tester / 14-day closed-testing rule that applies to new personal accounts.)
4. **Complete "App content" declarations:** privacy policy, ads, target audience, data safety, content rating, permissions, and **App access** (reviewer credentials + step-by-step login instructions).
5. **Complete the listing:** title, short/full description, phone/tablet screenshots, feature graphic, icon, category, contact details.
6. **Submit a production release** with managed publishing on. Review: hours to 7+ days for a first app.
7. **Publish** on launch day; staged rollout optional.

03 Bottlenecks and how to defuse them

Bottleneck	Store	Why it happens	Mitigation
Organization enrollment stalls	Apple	Manual verification of legal entity, binding authority and D-U-N-S; no published SLA. Mismatched D&B data, a non-officer enroller, or a personal email restarts the loop.	Enroll today with an officer as Account Holder. Confirm the D&B record first. If "pending" after 7 days, phone Apple Developer Support with the Enrollment ID.
First-app review is slow	Google	New developer accounts get extended scrutiny; Google says 7 days "or longer," and changing the listing mid-review can restart the clock.	Submit production ≥10 days before launch (Sep 17). Freeze the listing once submitted. Keep internal track running for customers meanwhile.
Login-gated app rejected as "incomplete"	Both	Reviewer can't get past the sign-in screen. Apple: Guideline 2.1 (over 40% of unresolved issues). Google: "App access" not filled in.	Provide a dedicated reviewer account with realistic data and no MFA (or a documented bypass). Explain in review notes that the app is a companion to a Salesforce-based Ohanafy subscription.

Bottleneck	Store	Why it happens	Mitigation
Beta review before customers can test	Apple	First TestFlight build to an external group is reviewed against App Review Guidelines.	Upload the first external build the day the account opens; internal testers (100 App Store Connect users) need no review.
Build/toolchain gates	Both	Apple requires Xcode 26 SDK; Google requires target API 36 and 16 KB page-size support for native libraries.	Confirm your dev/CI toolchain now; these fail at upload, not at review.
Forms that block "Submit"	Both	App Privacy labels, age rating (Apple, updated Jan 2026); Data safety, content rating, target audience (Google).	Fill all questionnaires when the app record is created, not the day of submission.
Payments-profile mismatch	Google	Legal name/address must match both D-U-N-S and the payments profile; fixes at D&B take days to propagate.	Copy values verbatim from the D&B record into both systems.

04 Timeline with checkpoints — Sep 8 to Oct 12

Dates assume both enrollments start **Tue Sep 8**. Diamonds are decision checkpoints; each has a pass condition and a fallback. Gray hatch = buffer, red hatch = uncontrollable risk window.

Checkpoint	Must be true to move forward	Who / what	If it isn't true
CP0 Tue Sep 8	Both enrollments submitted. D&B record confirmed (legal name, address, website). Apple Account Holder is an officer using an @ohanafy.com email; Google payments profile matches D-U-N-S.	Officer/Account Holder; finance for the \$299 + \$25; whoever owns the D&B profile.	Every day of delay here moves the iOS date one-for-one. Nothing else in the plan can absorb it.
CP1 Fri Sep 11	Google account verified; app record created; first .aab live on the internal testing track for the team.	Eng lead. Requires target API 36 build and Play App Signing enabled.	Check verification email for a mismatch; correct in payments profile / D&B and resubmit. Google's own review is only days, so a slip here still fits.

Checkpoint	Must be true to move forward	Who / what	If it isn't true
CP2 Tue Sep 15	Review-ready package frozen: privacy policy URL, support URL, screenshots (both platforms), descriptions, reviewer demo account (no MFA) with realistic data, review notes, App Privacy labels, Data safety form, age/content ratings.	Product + marketing + eng. This package is identical for both stores; do it once.	Apple still "pending" after 7 days → call Apple Developer Support with the Enrollment ID today.
CP3 Thu Sep 17	Android production release submitted with managed publishing ON. All "App content" declarations show Actioned.	Eng lead / release owner.	Submitting later than Sep 18 puts the 7-day review inside the Sep 28 buffer; keep the internal or closed track as the customer fallback.
CP4 Mon Sep 21 GO / NO-GO	Apple enrollment complete ; App Store Connect app record created; first build uploaded; external TestFlight group submitted for Beta App Review.	Account Holder + eng lead (needs a Mac with Xcode 26 or a Mac CI runner).	NO-GO for iOS store on Sep 28. Communicate iOS as "TestFlight on launch day, App Store to follow" and retarget the listing for the Oct 5–12 window. Android proceeds unchanged.
CP5 Tue Sep 22	iOS submitted for App Review with "Manually release this version." Beta App Review passed; customers can be invited via TestFlight public link.	Release owner monitors App Store Connect daily; someone is on point to answer Resolution Center within hours.	Each rejection round costs ~1–2 days; two rounds still land before Sep 28. A third pushes to the slip window.
CP6 Fri Sep 25	Both apps in "Pending Developer Release" / "Ready to publish." Launch comms, support docs and in-Salesforce enablement ready.	Release owner + customer success.	Android still "In review": normal for a first app; do not edit the listing. Launch iOS alone or announce a two-step launch.
CP7 Mon Sep 28	Launch. Release manually on both consoles (morning ET). Verify store pages, download and log in from a clean device on each platform.	Release owner.	Slip window runs to Mon Oct 12 . If Apple enrollment is still pending on Oct 5, escalate through Apple Developer Support and consider whether a different officer should re-enroll.

Three things to do before end of day. (1) Identify the officer who will be Apple's Account Holder and start the organization enrollment. (2) Create the Google Play organization account and payments profile with the D&B values pasted verbatim. (3) Assign an owner for the review-ready package due Sep 15, the reviewer demo account in particular.

05 Fallback plan: pre-release distribution if the listing isn't ready

Both stores let you put a real, installable build in customers' hands before the public listing exists. The important asymmetry: **both fallbacks still require the developer account**, so they protect you against slow *review*, not slow *enrollment*.

	Apple TestFlight (external)	Google Play internal / closed testing
Audience size	Up to 10,000 testers per app.	Internal: 100. Closed: email lists of up to 2,000 each (many lists allowed).
How customers join	Install the TestFlight app, then accept an email invite or tap a public link . Works on any iPhone.	You add their Google account email (or a Google Group); they open an opt-in link, then install from Play like any app.
Review before customers see it	Yes, once per group: Beta App Review (~12 h average, up to a few days). Later builds usually skip it.	Internal: none, live in minutes. Closed: standard review, several hours to longer.
Best use for Sep 28	Launch-day path if App Review is still running (or a rejection is being fixed). Share the public link with customers on Sep 28.	Launch-day path if Google's first-app review overruns. Closed testing looks and feels like a normal Play install.
Watch out	Customers must install a second app (TestFlight); builds expire after 90 days . Requires the same review-ready package (demo account, privacy policy).	Testers must use the exact Google account you listed; a personal Gmail vs. Workspace mismatch is the usual support ticket. No build expiry.

06 One checklist, both stores

Company & account

- D&B record: legal name, address, website current and public
- Apple: officer enrolls as Account Holder; two-factor Apple Account; @ohanafy.com email
- Google: Payments profile in exact legal name/address; all emails/phones OTP-verified
- Decide the public developer contact email/phone (Google shows org address + phone)
- Decide launch countries; EU on Apple requires DSA trader declaration

Build

- iOS: Xcode 26 / iOS 26 SDK, privacy manifest, App ID + automatic signing
- Android: target API 36, 16 KB page-size compliant, .aab with Play App Signing
- Version/build numbers agreed for launch (e.g., 1.0.0)

Review-ready package (CP2)

- Privacy policy URL and support URL, live and linked in-app
- Reviewer demo account: no MFA, realistic Salesforce data, never expires during review
- Review notes: what the app is, who uses it, how to log in, anything hardware/env-specific
- Screenshots: iPhone 6.9" + 6.5" (iPad if supported); Android phone (+ 7"/10" tablet if supported); Play feature graphic 1024×500; icon 512×512 / 1024×1024
- Name, subtitle/short description, full description, keywords, category
- Apple App Privacy labels and age rating; Google Data safety, content rating, target audience, ads, App access
- Export-compliance answer (standard HTTPS only → exempt)
- Release settings: Apple "Manually release"; Google managed publishing ON

07 Supporting documentation

Primary sources are Apple and Google documentation, checked Sep 8, 2026. Third-party sources are used only where the vendor publishes no figure (e.g., enrollment duration) and are marked as such.

Apple

1. [Program enrollment — Apple Developer Account Help](#) — organization requirements, D-U-N-S, binding authority, \$99/\$299 fees.
2. [App Review — Apple Developer](#) — "90% of submissions reviewed in less than 24 hours," demo-account guidance, expedited review, Guideline 2.1 statistic.
3. [TestFlight overview — App Store Connect Help](#) — 100 internal / 10,000 external testers, Beta App Review on first build, 90-day expiry, public links.
4. [Upcoming requirements — Apple Developer News](#) — Xcode 26 / iOS 26 SDK mandatory since Apr 28, 2026; age-rating update Jan 31, 2026; privacy-manifest reasons; DSA trader dates.
5. [EU Digital Services Act trader requirements — App Store Connect Help](#)
6. [Live App Store and TestFlight review times — Runway](#) (third party, observed) — Sep 2026 averages: ~11 h waiting + ~2 h in review; TestFlight ~12 h beta review.
7. [Apple Developer enrollment: how long it takes — Lance](#) (third party) — individuals 24–48 h (US), organizations 2–4 weeks; when to call Support.
8. [Apple Developer Forums — organization enrollment processing 2+ weeks](#) — representative of current enrollment-delay reports.

Google

9. [Register for a Play Console developer account — Play Console Help](#) — \$25 one-time fee, identity verification, Developer Distribution Agreement.
10. [Required information to create a developer account — Play Console Help](#) — organization vs. personal requirements, D-U-N-S, payments-profile match, what is shown publicly, "up to 5 days" payment verification.
11. [App testing requirements for new personal developer accounts — Play Console Help](#) — 12 testers / 14 days rule applies to personal accounts created after Nov 13, 2023; production-access review "seven days or less."
12. [Set up an open, closed, or internal test — Play Console Help](#) — internal track live "within minutes," 100 testers, no standard review; closed/open track limits.
13. [App review time — Google Play Developer Community guide](#) — "an app review can take 7 days or longer"; listing edits may restart review; escalation windows.
14. [Provide information for Google Play's app review \(App content\) — Play Console Help](#) — App access credentials and instructions, data safety, ads, target audience, content rating.
15. [Target API level requirements — Play Console Help](#) — Android 16 (API 36) by Aug 31, 2026; extension to Nov 1, 2026.
16. [Prepare your apps for Google Play's 16 KB page size requirement — Android Developers Blog](#)
17. [Understanding Android developer verification — Android Developer Console Help](#) — Sep 30, 2026 start in BR/ID/SG/TH; global 2027.
18. [How long does Google Play identity verification take? — PTKD](#) (third party) — "a few days, up to about five"; D-U-N-S mismatch as the leading failure cause.

Timelines reflect published vendor guidance and current observed averages; neither Apple nor Google guarantees review or enrollment durations. This brief is planning guidance, not legal advice. Prepared for Ohanafy, Sep 8, 2026.
